Objective: Seeking a position as a Java Developer.

Summary:

I am an experienced Full-Stack Java Developer with expertise in front-end and back-end technologies. I possess extensive knowledge in front-end layout design, JavaScript and CSS frameworks, SQL language, Java initialization of microservices, Maven, Gradle, and Spring Big Data. Additionally, I am skilled in creating databases using Java apps, testing and developing websites with APIs, DevOps methodology with continuous integration, and analyzing and monitoring system development, creating softwares with Java. I am a communicative and creative developer, capable of producing intelligent and diverse software.

Skills:

- Full-Stack Java development
- Front-end and back-end integration
- JavaScript and CSS frameworks
- SQL language
- Microservices with Java initialization, Maven, Gradle, and Spring Big Data
- Java syntax and functional app technologies
- SQL queries with database indexing
- Analysis and monitoring of system development
- DevOps methodology with continuous integration

Education:

- Full-Stack Java Developer, EBAC – British School of Creative Arts and Technology, 2023
- Analysis and Development of Systems, Universidade Positivo, 2024
- English, Fisk, 2020

Languages:

- English: Fluent (FISK, 2020)

- Spanish: Intermediary
- Portuguese: Native language

Some experiences in Java:

- I created a system using Java to register clients with some data to store information about these clients, in which each client can register, consult, delete and change their information:
  https://github.com/luangl/java_customer_registration

- I created a system using Java and a SQL database to register customers and take care of the store's inventory for a store's system, in which each customer entered their data and then it is easily consulted. In the store's part, the system developed in java with a database to take care of the stock of products among other things and being able to see the registered customers:

  https://github.com/luangl/tarefa_classes/tree/projeto3

- A code developed in Java for a school that asks for numbers that would be grades to calculate the average between them and then the console prints the final average and whether the student passed or not:

  https://github.com/luangl/tarefa_classes/tree/tarefa_controledefluxo

- A code developed in java, in which you write the person's names and genders separated by commas and at the end a table is shown separating the names by genders. I also made the test code to verify that everything is working correctly:

https://github.com/luangl/tarefa_classes/tree/testes_parte1

- A code developed in java for a system where customers register and can choose a contract to sign, they can also cancel, add new contracts, I also made the test code to verify that the code is working correctly:

  https://github.com/luangl/tarefa_classes/tree/tarefa_testeTDD

- A code developed in Java that asks the user for information and then the text with the information is printed on the console:

https://github.com/luangl/java_exercise

Certifications:

- Full-Stack Java Developer - EBAC - 2023
- Analysis and Development of Systems - Universidade Positivo – 2024
- English Course – Fisk - 2020
